

KOMPRESSOR II

REFRIGERATED - BATTERY OPERATED

- 24 VOLT ONLY—BUT CAN CONVERT TO 12V AT AN EXTRA COST.

The Viesa Kompessor II is a roof mount unit, designed for European trucks (Mercedes, Volvo, and Iveco ETC) as it only comes in 24 volt but we can convert it over to a 12 volt unit at an extra cost. This unit is fantastic for small to medium size sleeper cabs running in both dry and humid weather conditions. It is smaller, lighter, quieter and it has a greater cold generation capacity, that vibrates less and it is more easily installed.

PROS:

- Refrigerated – works well in all weather conditions
- Roof mount
- 1 KW - 29kgs
- Can run on its own set of batteries and charger (highly recommended as you will getting longer running time)
- Fast fitment time
- 1 year warranty
- Better design of interior and exterior components.
- The new design of the compressor holder reduces vibrations.
- The assembly of the evaporating unit has been simplified
- Consumption: 12-20 amp
- Adaptable to any type of cabin

CONS:

- Extra cost to convert to 12 volt
- Only comes in roof mount style
- Will not keep a large sleeper cab cold
- Cannot use while driving

OPTIONAL RECOMMENDED

Independent, sealed, deep cycle battery system managed by Redarc DC/DC charger, this gives you longer sleep time, whilst not affecting your truck battery. Batteries are universal to suit your truck.
