Automatic Tyre
Inflation System

NEW

VIGIA NM 344

The VIGIA system keeps tyre pressure constant. It warns the driver in the event of tyre pressure reduction, and automatically activates the inflation process at the same time. Having the system increases driver safety and improves efficiency.

+EFFICIENCY. + RELIABILITY. + SAFETY.

- Automatic shut-down in the event of a blow-out.
- Easy reading of indicators.
- Clear identification of air loss extent.
- Immediate warning indication in case of excessive air loss.
- Reduced tyre blow-out risk.

- Multiple connection capability for several inflation modules, allowing up to 9 axles.
- Excellent for bi-trailers.
- Complete integration with GESTYA system.
- Low electric consumption.

FEATURES

> DURABILITY

Proper inflation increases your tyre's operating life by 20% or more.

> SAFETY

Proper tyre inflation reduces the risk of accident.

> LESS FUEL CONSUMPTION

Fuel efficiency is optimized when tyres are properly inflated.

> PROTECTION OF TYRE CASING

Allows re-treading tyres several times.

> EFFICIENCY

Tyre pressure is maintained at a constant pre-set level recommended by the manufacturer.

> SAFETY SYSTEM

In the event of excessive air loss, a specialized device shuts off the system, this allows for the normal operation of breaks and suspension systems.

ACCESORIES

ELECTRONIC DRAINING VALVE

It is designed to automatically drain any water that might have accumulated in the air tank. This device allows to program the operating time according to the weather conditions.

Features

- Extends operating life of all the components in the unit which work with air.
- Air tanks clean without external help
- Eliminates condensations trapped in air reservoirs.

INFLATION VIEWER

This display is installed between the rotor and the inflation valve, allowing a quick identification of which tyre is calibrating and specifically visualizes the one that needs to be repaired.

Internal System

Exclusively for trailers

- Definitive solution for air drops and damages.
- The air gets to the tyres through a dedicated pipe inside the axle.

It integrates to the equipment already installed in the tractor-truck and does not use external connections. 100% secure.

VIGIA NM 247

Autonomous System

- Exclusive for trailers.
- Autonomous operation with air pressure booster.

The VIGIA NM 247 system is a revolutionary piece of equipment, it is ideal to automatically protect the tyres of semi-trailers. It doesn't need electricity to operate.

The equipment monitors the tyres and warns the driver of how severe the issue is by means of an LED light.

This equipment can charge itself with air from the air tank in order to generate power to operate the LED.

100% tyre pressure control, 100% safe, and 100% automatic.
